

INFORME DE COMISIÓN

OFICINA COMISIONADA

IFT/100/PLENO/OC-ASLI/057/2015
México D.F. a 20 de noviembre de 2015

Mtro. GABRIEL OSWALDO CONTRERAS SALDÍVAR
COMISIONADO PRESIDENTE
INSTITUTO FEDERAL DE TELECOMUNICACIONES
PRESENTE

En cumplimiento de lo dispuesto por el artículo 23, fracción II de la Ley Federal de Telecomunicaciones y Radiodifusión ("LFR") y del artículo 15 fracción I del Estatuto Orgánico del Instituto Federal de Telecomunicaciones ("IFT"), por este conducto remito a usted y para el correspondiente conocimiento del Pleno de este H. Instituto, el informe de comisión como se indica a continuación:

- LUGAR DE COMISIÓN:** Guadalajara, México
FECHA: 25 al 26 de octubre de 2015.
- CONGRESO:** Primera Conferencia Internacional del Institute of Electrical and Electronics Engineers (IEEE)sobre *Ciudades Inteligentes* (ISC2-2015)
- ACTIVIDADES EFECTUADAS:** Participación como ponente en el Panel: "*Smart Cities Government Best Practices*".
- VINCULACIÓN CON EL PROGRAMA ANUAL DE TRABAJO 2015:** Objetivo 6. Ser un regulador eficaz, imparcial, transparente y con mejores prácticas de gestión.
- COSTO TOTAL DE VIÁTICOS:** Costo del transporte: \$3,797.01 MXN
Costo de viáticos: \$3,781.23 MXN
Costo total de la comisión: \$7,578.24 MXN

Insurgentes sur 1143,

INFORME DE COMISIÓN

INTRODUCCIÓN

La primera Conferencia Internacional del IEEE sobre *Smart Cities 2015* (ISC2-2015) es un evento organizado por el Instituto de Ingenieros Eléctricos y Electrónicos (IEEE por sus siglas en inglés), particularmente patrocinado por el *IEEE Smart Cities Steering Committee*, cuyo tema central para este año 2015 fue la Sustentabilidad.

Tomando como contexto los diversos retos que actualmente enfrentan las ciudades del mundo, relacionados con los cambios poblacionales, el clima, la congestión en el transporte, la seguridad pública, entre otros, el IEEE eligió estratégicamente a la ciudad de Guadalajara como sede de esta conferencia internacional para presentar, analizar, discutir y compartir los avances que a nivel global se están realizando para enfrentar todos estos factores cambiantes en las grandes urbes, y con ello tratar de impulsar el desarrollo económico sostenible que la ciudad de Guadalajara ha demostrado tener por ser una de las principales ciudades de México impulsadas por la industria.

El comité de la conferencia está integrada por expertos de alrededor de diez diferentes países de todo el mundo, lo que permitió contar con diversas perspectivas y conocer la experiencia internacional sobre la creación de ciudades inteligentes, a fin de compartir y crear conocimiento entre los participantes de la conferencia.

Para más información sobre el objetivo de la conferencia y su desarrollo se sugiere consultar el siguiente sitio de internet:

<http://sites.ieee.org/isc2/>

PARTICIPACIÓN COMO PONENTE EN EL PANEL “SMART CITIES GOVERNMENT BEST PRACTICES”

En este panel también participaron las siguientes personas:

- Víctor Lagunes, Jefe de la Unidad de Innovación y Estrategia Tecnológica, Presidencia de la República.
- Pamela Miranda, Directora de Modernización del Comercio y los Servicios, Secretaría de Economía.
- Jaime Reyes, Secretario de Innovación, Ciencia y Tecnología, Gobierno de Jalisco.
- Alfonso Fonseca, Director de Innovación Gubernamental, Gobierno de Jalisco.

INFORME DE COMISIÓN

- Mario Arauz, Director de Innovación Gubernamental, Ayuntamiento de Guadalajara.

Mi participación consistió en mencionar varias de las actividades que el Instituto Federal de Telecomunicaciones ha estado realizando para favorecer el desarrollo de las Telecomunicaciones en México, así como su relación para la creación de ciudades inteligentes. Los temas que mencioné son los siguientes:

- I. El primer dividendo digital y la banda de 700 MHz
- II. La transición a la televisión digital
- III. La licitación de nuevas bandas de frecuencias para comunicaciones móviles (banda AWS)
- IV. La posibilidad de utilizar la banda de 2.5 GHz para los servicios de banda ancha móvil
- V. La regulación sobre la compartición de infraestructura pasiva
- VI. La adaptabilidad tecnológica, la importancia de contar con puntos de intercambio de tráfico de Internet en México, y sobre la necesidad de migrar a la versión 6 de IP (IPv6).
- VII. El segundo dividendo digital y el despeje de la banda de 600 MHz

Con el fin de presentar a mayor detalle el contenido de mi participación, integro como Anexo 1 de este informe los temas que aborde, misma que realicé en idioma inglés debido a la naturaleza de esta conferencia internacional.

Otros temas abordados por otros conferencistas fueron:

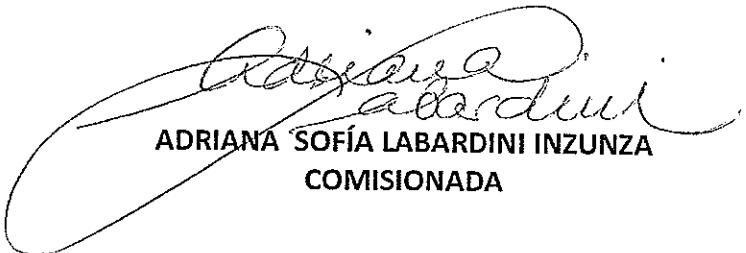

- El Presidente de IEEE Roberto de Marca hizo una presentación sobre la prospectiva y requerimientos de ciudades inteligentes y los proyectos en 3 ciudades: Guadalajara, México; Trento, Italia; y Wuxi, China.
- Se enfatizó sobre la gran importancia que tienen las colaboraciones conjuntas entre las universidades, gobierno e industria para impulsar proyectos tan importantes como lo son las ciudades inteligentes.
- Se mencionaron las principales actividades que cada dependencia ha realizado en materia de tecnología, innovación y conectividad.
- Al respecto del punto anterior, el Jefe de la Unidad de Innovación y Estrategia Tecnológica de la Presidencia de la República, Víctor Lagunes, mencionó los principales retos públicos que ellos han enfrentado durante el desarrollo del proyecto México Conectado, particularmente el concerniente a la coordinación entre dependencias del gobierno.
- El Secretario de Innovación, Ciencia y Tecnología del Gobierno de Jalisco, Jaime Reyes, mencionó algunas de las estrategias que han estado realizando: i) el impulso a la

INFORME DE COMISIÓN

excelencia académica, ii) convenios de colaboración academia-industria, iii) movilidad, educación y casas inteligentes, iv) exportación de proyectos mexicanos en el mercado mundial.

- El Director de Innovación Gubernamental del Ayuntamiento de Guadalajara, Mario Arauz, comentó las principales actividades que el ayuntamiento ha impulsado para lograr un gobierno innovador: proyectos focalizados para contar con ciudades creativas, energía inteligente y mercados con presencia global. También mencionó la importancia de impulsar mayormente la transparencia y el acceso a la información por parte de la población.

ATENTAMENTE

ADRIANA SOFÍA LABARDINI INZUNZA
COMISIONADA

C.c.p. Juan José Crispín Borbolla, Secretario Técnico del Pleno.- Para su inclusión en la próxima sesión ordinaria del Pleno como asunto general.

C.c.p. Juan Carlos Hernández Wocker, Coordinador de Asuntos Internacionales – Para su conocimiento.

C.c.p. Dr. Pascual García de Alba, Director del Centro de Estudios- Para su conocimiento

INFORME DE COMISIÓN

ANEXOS

Anexo 1: Temas abordados por la Comisionada Adriana Labardini Inzunza

Smart Cities

Smart cities initiatives around the world come in all shapes and sizes, depending on the problems they are intended to solve. This includes tackling new global challenges for making smart cities a reality:

- a) New and innovative policy and regulatory approaches,
- b) Technology adaptability,
- c) Sustainable energy.

As part of my participation in this panel, I would like to begin by pinpointing the key enablers that will allow smart cities to succeed, as well as exploring the novel policies and regulatory approaches that may be needed to reach this outcome. I would also like to share with you the initiatives that the Federal Institute of Telecommunications has been promoting for the foreseeable future of mobile broadband services.

Key enablers:

1. Smart devices

Smart cities need thousands of sensors in order to feed information into smart city solutions, as well as for enabling mobile devices used by smart city residents to connect and share information with backhaul networks.

The Federal Institute of Telecommunications has released various conformity assessments with updated technical standards, in order to homologate and certificate smart devices for broadband access. It has also adopted rules for the establishment of Telecommunications Certification Bodies and the recognition of foreign testing laboratories as part of the Mutual Recognition Agreements that Mexico has celebrated with other countries.

2. Ubiquitous connectivity – spectrum

Connectivity solutions in a smart city have to be expansive and multi-dimensional. Traditional fixed and mobile connectivity will need to evolve and increase its capacity, but it will also be necessary to explore other technologies such as Wi-Fi, Near Field Communication (NFC),

INFORME DE COMISIÓN

Bluetooth, Radio Frequency Identification (RFID), to name but a few that rely on both licensed and unlicensed spectrum. This is very important to the success of M2M and IoT technologies. There will also be a need to explore other connectivity solutions like TV white spaces.

TV white spaces are gaps in the radio spectrum of TV-frequency bands, which can be used to offer new wireless applications for the benefit of local consumers and small businesses. This is appealing for Telcos and industry because these frequencies can travel longer distances and more easily through walls than the bands mainly used by other wireless technologies.

The challenge for regulators is to place the foundations to use TV white spaces. The key challenge is to set the rules for sharing and managing these frequencies. This includes the technical constraints, such as power level limits, with which devices must operate in order to avoid interferences.

The Federal Institute of Telecommunications has diverse strategic plans for the foreseeable future of mobile broadband services and the efficient use of spectrum. Some of them include the clearing of TV frequency bands with the following:

A. Transition to Digital Terrestrial Television

Mexico is currently in the midst of a transition from Analogue to Digital Terrestrial Television. This will help to:

a) Clear the 700MHz band – First digital dividend

This band has been committed for a national shared wholesale network in the frequency range 698 – 806MHz identified as IMT band. This band has an effective 90MHz of bandwidth and its segmentation scheme is well accepted worldwide. Also, it follows the 3GPP band 28 for LTE services. This band provides good coverage with outdoor and indoor penetration capabilities. It also allows multicarrier configurations. Therefore, this band is crucial for the success of smart cities

b) Start the clearing of the 600MHz band – Second digital dividend

Taking into account the technological advances and the rising of mobile broadband services, the strategic plan also considers the use of the 600MHz band for IMT services. The main steps involved in the clearance of the band are: i) the allocation of new TV channels below 608MHz; ii) optimization of the spectrum allocated in the band 470 – 608MHz; and iii) development

INFORME DE COMISIÓN

strategies to promote the relocations of digital terrestrial television channels in the VHF band. This band will also be a key element for smart cities.

B. The use of the 2.5GHz band

The 2.5GHz band has been identified as IMT by the ITU and Mexico has adopted the C1 band plan that has 190MHz of bandwidth. This segmentation scheme is also well accepted worldwide and it follows the 3GPP class 7 band for LTE services. The purpose of the Federal Institute of Telecommunications for this band is to:

- a) Define effective mechanisms for sharing the spectrum and the operation of the mobile services, and
- b) (to) Oversee the bidding process of the available segments for the provision of the mobile broadband services.

This band might be of great use for addressing the capability challenges of Telcos in mega cities, particularly for indoor coverage.

3. Infrastructure sharing and access:

For ubiquitous connectivity in smart cities it is fundamental to ensure that high-speed services can be deployed efficiently and that unnecessary duplication is avoided. To achieve this outcome, it may be necessary to facilitate access to, and sharing of, facilities and infrastructure. The aim is to allow sensors and other smart components to be efficiently installed and collocated in towers, buildings and key structures.

In order to achieve this, regulation may be necessary to ensure developers and landowners to provide access to key structures, which would allow operators to efficiently install telecoms infrastructure thus facilitating the proliferation of smart city solutions. The lack of such access might be a significant hindrance for smart cities.

The Federal Institute of Telecommunications, as part of the regulations imposed to the incumbent in telecommunications, has determined that passive infrastructure of the incumbent must be available to other concessionaries of public telecommunications networks on a non-discriminatory basis. This means that the incumbent must allow concessionaries to access and share its passive infrastructure. The aim of these regulations is to allow market balance and fast deployment of infrastructure for broadband services.

4. Data sharing and access:

INFORME DE COMISIÓN

Smart cities will require the input of multiple IT, technological, and governmental stakeholders order to collect, share, communicate, and process and secure data from different systems and services such as smart grids, intelligent transport, smart buildings, telecommunication service providers, just to name a few, in order to work together in an unified way. With this in mind, and considering the high degree of personalization required for smart city solutions, regulators and users need to become more skilled about data protection and security requirements. Ineffective solutions in this matter might derail smart city initiatives.

An effective data protection compliance framework requires simple and effective claims procedures that kick in when harm has been caused to an individual, with flexible principles such as openness, transparency, legality, consent, responsibility and proportionality.

Some of the challenges that we have here in Mexico are:

- Ensuring security in the shipping and receiving of data
- Guaranteeing a proper and lawful use of the data
- Informing users about the usage of their data
- Respecting the ARCO rights
- Respecting the Protection of Personal Data Law
- A proactive INAI and other state data prot. agencies

Security management is also critical for developing user trust and for protecting data flow over smart city networks. Smart cities must develop protocols for securing access between the smart city technology stack and other governmental or private systems, which require new authentication processes, secure storage, access controls and privileges, data separation rules for distinguishing operational data from personal or sensitive data and security products for smart city solutions.

5. Financing:

Governments, investors, Telcos and technology vendors need to partner on a deeper level than for traditional projects to ensure the successful delivery of the smart city vision. Government has a potentially significant role to play in the financing of smart cities, including through public-private partnerships (PPP). These PPP projects may require to ensure that smart cities can generate reasonable returns for private investors and become financially self-sustaining over time.

INFORME DE COMISIÓN

The national shared wholesale network will be financed and deployed through a public-private partnership deal between the Secretary of Transport and Communications (SCT) and the private investor.

6. Conclusions:

Government, It industry and citizenship will be critical partners and will need to play a prominent role for the outcome of smart cities. Regulations need to be revisited to address innovative use of spectrum, effective means of data protection and security risk management, to promote user trust in smartcities.

Xu et Al, Department of Mechanical Engineering MIT, Cambridge Massachusetts, USA</i>	IOT Talk 2 "Towards an IoT Based Water Management System for a Campus", <i>Purnel Verma et Al, Indian Institute of Science, Bangalore, India</i>		ODA Talk 2 "Characterizing Evolutions of Extreme Public Transit Behavior Using Smart Card Data", <i>Zhiyong Cui et Al, Peking University, China</i>				
11:00-11:20	STR Talk 17 "Smart Management of Next Generation Bike Sharing Systems using Internet of Things" <i>Mohammad Abdur Razzaque et Al, School of Computer Science and Statistics, Trinity College Dublin, Ireland</i>	SHB Talk 3 "Street Lighting In Smart Cities: A Simulation Tool for the Design of Systems based on Harrowgate PLC" <i>Adele Silton et Al, University of Trento, Italy</i>	IOT Talk 3 "Multi-dimensional Query for Internet of Things (IoT) networks", <i>Hemant Tiwari et Al, Samsung Research India, Bangalore, India</i>		ODA Talk 3 "Visual Object Tracking via Deep Neural Network" <i>Tianyang Xu et Al, Jiangnan University, China</i>				
11:20-11:40	STR Talk 18 "Motion-Vector Clustering for Traffic Speed Detection From UAV Video", <i>Rulin Lin Ke et Al, University of Washington Seattle, WA, U.S.A.</i>	SHB Talk 4 "Energy saving in smart homes based on consumer behavior: A case study" <i>Michael Zehnder et Al, Institute of Business Information Systems - University of Applied Sciences and Arts Northwestern Switzerland (FHNW)</i>	IOT Talk 4 "Urban Operating Systems for Sensor Network Management In Smart Cities", <i>Oleg Mora and Victor Larios, University of Guadalajara, Mexico</i>	Smart Cities Hackathon	ODA Talk 4 "GeoSmart Cities: Geo-information and event-driven geoprocessing as enablers of smart cities" <i>Manuel Garcia Alvarez et Al, Faculty of Geo-Information Science and Earth Observation, Netherlands</i>				
11:40-12:00	STR Talk 19 "A Stereo Visual Odometry Based On SURF Feature And Three Consecutive Frames", <i>Yong Ren et Al, Department of Automation, Tsinghua University, Beijing P.R. China</i>	SHB Talk 5 "An Architecture for the Analysis and Detection of Anomalies In Smart City WSNs" <i>Victor Garcia et Al, Universitat Oberta de Catalunya, Spain</i>	IOT Talk 5 "Gobby Tree", <i>Aditya Gupta, IIT Ropar, India</i>		ODA Talk 5 "Geolocated Big Urban Data", <i>Abdul Al Shanti et Al, The University of Warwick, United Kingdom of Great Britain and Northern Ireland</i>				
12:00-13:00	Lunch								

	Session Chair: Jing Pang	Session Chair: Oscar Hernández	Smart Health Track (SHA) Session Chair: Agustín Solana		Session Chair: Kristian Kloeckl		
13:00-13:30	STR Talk 20 "Enabling Participatory Routing Using A Smart Routing Platform", Nicolás Cordero et Al, Future Cities, DSG, Trinity College Dublin, Ireland	SHB Talk 6 "A Context-Awareness Architecture for Managing thermal energy in a nZEB, Integrating Semantic Sensor Nodes as Enabler of Smart Environments" Oscar Hernández et Al, CIATEQ, A.C., Mexico	SHA Talk 1 "Hearing Aid devices for Smart Cities: A Survey" Eduardo García-Espínosa et Al, Intel, Mexico		ODA Talk 6 "TwitterJam: identification of mobility patterns in urban centers based on Tweets" Francisco Rebelo et Al, FEUP, University of Porto, Portugal		
13:30-13:40	STR Talk 21 "Review of Fuzzy Logic In Intelligent Traffic Light Control", Jing Pang, Department of Electrical and Electronic Engineering, Computer Engineering Program, California State University, Sacramento, CA, U.S.A	SHB Talk 7 "Home Personalization Through Raspberry Pi" Sankha Karki et Al, IISc Bangalore Institute of Technology, India	SHA Talk 2 "Mobile Applications Utilized for the Prevention of Potential Epidemics in Smart Cities" Raúl Béjar et Al, Universidad de Guadalajara, Mexico	Smart Cities Hackathon	ODA Talk 7 "Tool theory and the urban data medium: data driven visual tools for urban energy" Kristian Kloeckl, Northeastern University, United States of America	WORKSHOP 5 High Performance Computing for Smart Cities	Smart Cities Exhibition Area
13:40-14:00	STR Talk 22 "Usability Evaluation of Standing-type Personal Mobility Devices for Elderly People", Noelia Soto, Department of Creative Engineering National Institute of Technology, Tsuruoka College, Japan	SHB Talk 8 "INDOOR PROPAGATION ANALYSIS APPLIED IN ZIGBEE NETWORKS" Diego Poul Chocón Troya et Al, Universidad Politécnica Salesiana, Ecuador	SHA Talk 3 "Ubiquitous Monitoring of Human Sunlight Exposure In Cities" Ahmed Al Shemari et Al, Warwick Institute for the Science of Cities, The University of Warwick, United Kingdom of Great Britain and Northern Ireland		ODA Talk 8 "Language Design for Developing Smart Adaptive Services" Nicolás Cordero and Slobhán Clarke, Future Cities, DSG, Trinity College Dublin, Ireland		Smart Cities Demonstrative Exhibition Area
14:00-14:20	STR Talk 23 "Epidemic Routing in Vehicular Delay-Tolerant Networks: the Use of Heterogeneous Conditions to Increase Packet Delivery Ratio" Roberto Hernández et Al, Tecnológico de Monterrey - Campus Querétaro, México	SHB Talk 9 "Towards a Fully Automated Monitoring System for Manhole Cover" Hesham Aly et Al, Staffordshire University, United Kingdom of Great Britain and Northern Ireland	SHA Talk 4 "Wandering Detection Methods In Smart Cities: Current and New Approaches", Edgar Bolísta et Al, Smart Health Research Group, Department of Computer Engineering and Mathematics, Universitat Rovira i Virgili, Tarragona, Spain		ODA Talk 9 "Towards an Ontology-based Context Model for Smart City Operations", Adrienne Ghannem et Al, Information Systems Department, Ahmed Bin Mohammed Military College, Doha, Qatar		
14:20-14:40	STR Talk 24 "Towards Better Driver Grade Estimation in Smart Vehicles", Siti Mohd Zai, Faculty of Computing, Engineering and Science, Staffordshire University, Stoke-On-Trent, United Kingdom	SHB Talk 10 "DEWA's Smart Solution to Mitigate the Substation Fire Incident in Dubai Substation" Islam Abdmahmud et Al, Dubai Electricity and Water Authority (DEWA), United Arab Emirates	SHA Talk 5 "Context-Aware Recommendations for Smart Health", Fran Casino et Al, Smart Health Research Group, Department of Computer Engineering and Mathematics, Universitat Rovira i Virgili, Catalonia, Spain		ODA Talk 10 "Frame standardization for Smart Cities monitoring applications", Miguel Sánchez Mérar et Al, Telecommunications Department, National Polytechnic Institute, Mexico City		
14:40-15:00	Coffee Break				Coffee Break		
	Session Chair: Huifan	Session Chair: Uming Bai	Session Chair: Chun Wang		Session Chair: Meng Li		
15:00-15:20	Special Session SPSS Smart and Connected Vehicles: Opening Remarks + Talk 1 "Prediction of the shortest travel time based on intersection delay", Xin Cheng et Al, School of Information Engineering, Chang'an University, Xi'an, China	SHB Talk 11	SHA Talk 6 "A Combinatorial Auction for Cost Reduction in City Home Health Care", Zhile Xie and Chun Wang, Concordia Institute for Information Systems Engineering, Concordia University, Montreal, Canada		ODA Talk 11 "Deep Learning for Big Data: Challenges and Opportunities", Xuejun Wu, Tsinghua University, China		
15:20-15:40	SPSS Talk 12 "Visual Odometry for On-Road Vehicles Based on Tiltof-Tensor", Hai-Gen Min et Al, Department of Traffic Information Engineering and Control, Chang'an University, Xi'an, China	SHB Talk 12 "IoT framework for Smart Buildings with Cloud Computing", Jesus Pacheco et Al, The University of Arizona, United States of America	SHA Talk 7 "DEVELOPING SUSTAINABLE HEALTH FRAMEWORKS IN SMART CITIES", Inas Khayat, The Dartmouth Institute of Health Policy & Clinical Practice, Geisel School of Medicine, Dartmouth College, USA	Smart Cities Hackathon	STR Talk 25 "THE LPI SYSTEMS TESTS", Zhi Yu et Al, School of Engineering, Sun Yat-sen University, China	Smart Cities Exhibition Area	
15:40-16:00	SPSS Talk 13 "A License Plate Recognition Algorithm Under Low Illumination Environment", Jie Le Zhao et Al, Department of Traffic Information Engineering, Chang'an University, Xi'an, China	SHB Talk 13 "Indoor CO2 level control using wearables", Swapna Sridharan, Samsung Research Institute, Bangalore, India	SHA Talk 8 "A Smart Health hybrid cloud solution for 'Breast Cancer' treatment by using Big Data visualization use case, implementing an efficient image processing with the use of leading edge technologies", Manuel Avilés et Al, IBM, México		STR Talk 26 "Bottleneck Pattern Study for Urban Expressway Using Big Traffic Data", Han Jiang et Al, Tsinghua University, China	WORKSHOP 6 Curricular Design for Smart Cities	Smart Cities Demonstrative Exhibition Area
16:00-16:20	STR Talk 27 "Smart Streets – A Multifunction Management Infrastructure to Smart Cities' Context", Romilda Bezerra et Al, IFBA, Brazil	SHB Talk 14 "SHINESenior: Personalized Services for Active Ageing-in-Place", Uming Bai et Al, SMU-TCS City Lab, Singapore Management University, Singapore	Smart Manufacturing and Logistics Track SML Talk 1 "On Computational Infrastructure Requirements to Smart and Autonomous Cities Framework" Romilda Bezerra et Al, IFBA, Brazil		STR Talk 27 "Open data for intelligent transportation systems studies: opportunity and challenges", Jiongchong Deng and Ruixia Zhang, Sun Yat-Sen University, China /		
16:20-16:40	STR Talk 28 "Cluster & Zone Based Speed Control System", Sunny Sharad and Syam Sridharan, Samsung R&D Institute, Bangalore, India	SHB Talk 15 "District of Future – DoF, open framework for the generation and optimisation of energy consumption in district environments" Rubén Cádizos Mas et Al, EVERIS, Barcelona, Spain	SML Talk 2 "Auction Model for Mass Customization of Logistics", Wei Yan and Chun Wang, Concordia Institute for Information Systems Engineering, Concordia University, Montreal, Canada		STR Talk 28 "Using Gamification to Incentivize Sustainable Urban Mobility" Romeo Kazhamiakin et Al, Fondazione Bruno Kessler, Italy		
16:40-17:00	Coffee Break				Coffee Break		
17:00-17:15							
17:15-17:30							
17:30-17:45							
17:45-18:00							
18:05-18:15							
18:15-18:30							
18:30-18:45							
18:45-19:00							
	IEEE Core Smart Cities Prospective Plenary Panel				Free Time		

18:00-18:15	
19:15-19:30	
19:30-19:45	
19:45-20:00	
20:00-20:15	
20:15-20:30	
20:30-20:45	
20:45-21:00	
21:00-21:15	
21:15-21:30	
21:30-21:45	
21:45-22:00	

Gala Dinner in Mexico II
Hackathon final presentations and winners selection
1st Awarded Paper announcement
New Smart Cities Students Awarded
Presentation from Sunfar Light CTO

Wednesday, October 26th, 2016													
08:00-08:15													
08:15-08:30													
08:30-08:45													
08:45-09:00													
09:00-09:15													
09:15-09:30													
09:30-09:45													
09:45-10:00													
10:00-10:20		Coffee Break											
		Smart Citizens Track I (SC21) Session Chair: Marcus Wigand	Session Chair: Alex Buckman	Smart Citizens Track II (SC22) Session Chair: Manuel Avalos									
10:20-10:40		IoT Talk 6		SHB Talk 16 "Dwelling characteristics and thermal characteristics of residential smart meter data: A state-space system identification approach", Gord Stephen et Al, Department of Environment and Resource Studies, University of Waterloo, Canada	SC22 Talk 1 "Social Network in Smart Cities: Comparing evaluation models", Leonidas Anthopoulos et Al, Business School, TUI of Thessaly, Greece	Smart Cities Hackathon	WORKSHOP 7 Smart Food UDG - MIT Media Lab City Farm	WORKSHOP 8 Postgraduate Students Workshop for Smart Cities	Smart Cities Exhibition Area				
		"Smart Cities Platforms and Applications", Dr. John Jiang, VESS, LLC, United States of America											
10:40-11:00		SC2 Talk 1		SHB Talk 17 "Optimising building design for smart grid efficiency", Steve Jubb et Al, Department of Civil and Structural Engineering, University of Sheffield, Sheffield, U.K.	SC22 Talk 2 "The role of hackers in Smart Cities", Manuel Avalos Vega and Moya Albo, IBM, México								
		"3dCity: An Innovative Way to Explore Cities", Cetinhan Ahmet Barbu et Al, German Research Center for Artificial Intelligence (DFKI), Germany / "Federica II", Italy											
11:00-11:20		SC2 Talk 2		SHB Talk 18 "SmartSinger", Nicolas Gondras et Al, Future Cities, DSG, Trinity College Dublin, Ireland	SC22 Talk 3 "Territorial smartness and the relevance of the learning ecosystems", Carla Giovannella et Al, University of Rome La Vergata, Italy								
		"Smart City for the Smart Governance of the Urban Environment", Carmela Gorgiulo et Al, University of Naples "Federico II", Italy											
11:20-11:40		SC2 Talk 3		SHB Talk 19 "From Old Grid to Smart Grid: The Impact of Grid on the Electricity Customer", Alfredo Castellanos, S&C Electric Company	SC22 Talk 4 "Tourist app for Smart TVs Enabling a Smart City", Luis Leonardo Camargo et Al, College of Engineering, University of Magdalena, Santa Marta, Colombia								
		"A Collaborative, Interdisciplinary Initiative for a Smart Cities Innovation Network", Marisol Villanueva-Rodríguez et Al, Smart Cities Innovation Center, CUCSEA University of Guadalajara Zumpango, Mexico											
11:40-12:00		SC2 Talk 4			SC22 Talk 5 "Research of new planning layout model which can be described as low investment high security Northwest districts of Beijing in Lecheng town Foshan city Guangdong province as a case", Wu Yenpan and Wu Keyuan, Shenzhen APECAND DESIGN CO., LTD, Shenzhen, China Shenzhen, China								
12:00-13:00		Lunch											
13:00-14:30				IEEE Smart Cities MOOCs Strategy Plenary Panel Session									
14:30-15:00		Closing Ceremony + IEEE GDL Text - Celebrating 25 Years
